Food Safety in California: An Integrated Approach

Stacy Aylesworth
Senior Environmental Scientist
California Department of Food & Agriculture
MRL Harmonization Workshop May 2019

Agenda

- Organizational Overview
- Pesticide Data Program
- State monitoring program
- State commercial feed program
- State fertilizer inspection program

Organizational Overview

CDFA

CalCannabis

Measurement Standards

Animal Health

Marketing

Inspection Services

Plant Health

Center for Analytical Chemistry

- Federal program (USDA)
- Food Quality Protection Act of 1996
- Most comprehensive pesticide residue database

- Used by many organizations
- PDP's data included in the GEMS database
- No enforcement

- PDP Data used to:
 - Assess dietary exposure
 - —Set/renew/revoke tolerances
 - —Facilitate global trade/exports

- Test fruit, vegetables, grains, meat, dairy, honey, infant formula, etc.
 - —Focus on infants and children

- 7 labs nationwide
- 14 commodities
- ~10,000 samples collected in 10 states

- Commodities are sampled monthly (60 samples/month)
- CA tests ~1,800 samples annually
- 470 pesticides in screen

- Analyzed by GCMS/MS and LCMS/MS
- Most pesticides LOD = 1 ppb
- Highest finding 296 pesticides in a set of 30 strawberry samples

- Enforcement of proper pesticide use
- California Department of Pesticide Regulation (CDPR)
- Test produce sold in CA
- ~3,800 samples/year

- "Environmental Justice"
 - Focus on foods highly consumed by low income and minority communities
 - Multi-lingual publications

- Cactus pads (nopales) from Mexico
 - Dimethoate (NTE), 310 mg/kg
 - -Omethoate (NTE), 400 mg/kg
 - Monocrotophos (banned), 18 mg/kg
 - Methidathion (banned), 25 mg/kg

- Cactus pads quarantined and removed from store shelves or destroyed
- Warning issued by CDPR

- FFLDRS (Feed, Fertilizer & Livestock Drugs Regulatory Services)
- Compliance, label accuracy, complaint investigation

- Ensure clean & wholesome supply of meat and milk
- Fair marketplace

- CA imports 22 million tons of feed annually
- 80% grain feed is imported
- Most organic feed imported due to GMO

- Aflatoxin
 - Naturally occurring toxin produced by mold
 - Aflatoxin in feed conveyed to milk

- Aflatoxin is VERY toxic

 - Liver damage Immune system
 - Birth defects Carcinogenic

Can't kill it

- Milk exported from CA to AZ had high levels of Aflatoxin
- Traced back a CA organic dairy (canola meal feed from Canada)

 Removed feed and 2 days later milk was Aflatoxin free

- Ensure fertilizing materials are safe and effective
- Fair marketplace

- Cannabis
 - Growers used fertilizer with added synthetic plant growth regulators (PGRs)
 - Paclobutrazol, Daminozide, Chlormequat
 Chloride

- Plant Growth regulators
 - —Get into plant cells
 - —Smaller, more compact plants
 - Earlier flowering

- Post-harvest "micro-nutrient" spray
 - Crystallizes on flowers
 - Adds considerable weight

Medically compromised people inhale these compounds

- Products removed from market
- One CA company fined \$150,000

Future Plans

- Method expansion
- GMO screening for food & feed
- FDA collaboration 1,100 pesticides by HRMS
- Hemp potency testing

Thank You
